Quality Tracking #:	2022-030	Classification:	Incident
Non-Conformance Level:	N/A	Section:	Toxicology
Date of Discovery:	02/18/22	Date of Incident:	01/13/17

This report has been amended to correct the following:

The associated ACN for 2018-04943 from 036896518 to 036869518, FCN 2018-08759 to 2018-06759, the associated ACN for 2020-00017 from 000165750 to 000165720, The associated ACN for 2020-02798 from 027412420 to 024712420 and the associated ACN for 2020-15689 from 152930420 to 152390420. Any case records where the original quality report was uploaded prior to discovery of this issue and subsequent amendment on July 11, 2022 will not have an amended quality report uploaded as the revisions are administrative in nature.

Forensic Case Number(s), if applicable:	Agency Case Number(s), if applicable:
Refer to Appendix A for a list of involved cases.	Refer to Appendix A for a list of involved cases.

Description of Non-conformance:

The Toxicology section's process for updating the retention times in the data analysis software in instances where blood alcohol analysis runs were restarted after being aborted due to an instrument error was not in compliance with the section SOP. A review of all affected cases confirmed there was no impact to any reported results.

Additional Information/Follow-Up:

On February 18, 2022, an analyst discovered that the Toxicology section's process to update calibration tables in restarted alcohol sequences was not updating the expected retention times for analytes in compliance with the section SOP which requires that the "Retention time of reporting analyte(s) must be within $\pm 1\%$ of the mean retention time of calibrators."

When alcohol sequences are aborted due to an instrument error after the analysis of case samples has started, the sequence is restarted by reinjecting the previous bracketing control followed by the next unpunctured case sample to the end of the sequence. Due to limitations of the data analysis software, each sequence portion is collected as a separate result set. The calibration curve collected at the beginning prior to the sequence stopping is not directly integrated into the result set of the restarted portion of the sequence. The calibration table associated with the second result set (restarted portion) automatically resets to the copy of the master method calibration table and will not contain that batch's calibration data.

Prior to the discovery of this nonconformance, the calibrator data collected in the first sequence portion were manually added to the calibration table for the restarted portion of the sequence to update it by using the "recalibrate/replace" menu option in the software. In doing this, the calibration table was manually updated in a stepwise fashion by replacing the calibration data one level at a time. Using this process, the peak areas are replaced one level at a time as expected, but the expected retention time (RT) is also replaced one level at a time rather than using the floating weighted mean (75% new) that the validated sequence method uses. Because of this, there were occasions where the calibration table from the second result set showed different expected RTs from the calibration table of the first data set.

The range of differences between the original calibration table (effectively used to process the start of the runs) and the second (effectively used to process the second part of the runs) was very small, between -0.17% and 0.12%, and did not affect the test results.

Summary of Root Cause Analysis:

Note: Incidents are documented for tracking purposes and trend analysis. Root Cause Analysis is not required for incidents.

N/A

Actions Taken:

All alcohol batches analyzed from the time the method was validated on each instrument were reviewed to determine if there was a noncompliant calibration table being used for data analysis. There were 30 alcohol batches where a noncompliant calibration table was used.

In 15 of these batches, the RT of the calibrators of the calibration table used to reprocess the second portion of batch data had the same expected RT values from the calibration table of the first data set (ALC_20170803_EH, ALC_20180419_DM, ALC_20181226_VC, ALC_20190220_DM, ALC_20190409_VC, ALC_20190923_ASG, ALC_20210111_VC, ALC_20210120_HM, ALC_20210203_JP, ALC_20210312_MR, ALC_20210317_MR, ALC_20210323_VC, ALC_20210421_EC, ALC_20210421_HM, ALC_20210428_MR).

In the other 15 batches, the RT of the calibrators of the calibration table used to process the second portion of batch data showed different expected RTs from the calibration table of the first data set (ALC_20170112_CLR, ALC_20180523_DM, ALC_20180606_DM, ALC_20181227_DM, ALC_20190327_AAJ, ALC_20190403_AAJ, ALC_20190701_AAJ, ALC_20190731_CLR, ALC_20191024_CLR, ALC_20200113_AAJ, ALC_20200427_EP, ALC_20200511_CLR, ALC_20200622_EP, ALC_20201027_CLR, ALC_20210325_MR).

The data from these 30 batches were reviewed to determine if the reporting of the cases in the batch were affected. Upon review it was found that there was no technical impact on the reporting of results for the 900 cases analyzed in these batches.

The process to update calibration data in a restarted sequence has been changed. The calibration data (curves and RTs) are copied over into the second sequence exactly. This is achieved by taking a copy of the sequence method file (ALC.M folder) for the first sequence in the windows file explorer and copy/pasting it into the data folder for

the restarted sequence after renaming that sequence method file to prevent it from being overwritten. This updated process uses the same sequence method to reprocess both portions of the data, so the calibration tables for each portion are identical (curves and RTs).

There were three alcohol batches that were restarted due to instrument error between the discovery of the nonconformance and the implementation of the new process (ALC_20220217_HM, ALC_20220221_MR, and ALC_20220307_EP). These batches contain comments and/or corrections to the data where needed. The first alcohol batch utilizing the new updated process is ALC_20220315_EP.
