

The Multimedia Section validates forensic software prior to use on casework. As technology advances, more software options are available for use on audio and video casework. This means that some validated software will be used only infrequently.

After infrequently used software (12 months or more since last used on casework) has been identified, it will be added to the infrequently used software list. All software on this list will be performance verified prior to use in case work.

Software

1. Sony Vegas Movie Studio version 11
2. DC Forensics version 8.5
3. SES4 Speech Extraction version 3
4. Star Witness version 1.7.388.1
